Hydrotech Termination Bar SS

Sheet No: PD301FR
Issued: July 2021
Pages: 1 of 1

Description

Hydrotech Termination Bar SS is a stainless steel termination bar supplied in 1500 mm lengths, with pre-drilled fixing points at 150mm centres.

Use

For use as a continuous mechanical termination of Hydrotech waterproofing membranes at the head of upstand details.

Note: Upstand details should terminate a minimum of 150mm from the adjacent finished roof level. Where this is not possible, authorisation from the specifier and building control must be in place. In all cases, any warranty issued for the Hydrotech membrane will cover entry of water through the upstand membrane, but not over it.

Application

Fix the termination bar securely into place at 150mm centres with stainless steel screws of a type and length as appropriate for the substrate into which they are to be installed, to be confirmed by the specialist fixing supplier. Drill pilot holes and plug as necessary, in accordance with the fixing supplier's recommendations.

The termination bars must be continuous and level. Maintain a 3mm gap between lengths to allow for potential expansion.

Any cut ends (such as at corners) must be filed smooth and rounded to eliminate any sharp edges.

Storage

Store in a clean, dry, secure location.

Product Data

Thickness	3.0 mm (11 gauge)
Width	25 mm
Length	1500 mm
Steel type	304 (stainless)
