refurbishment project [contact@alumascroofing.com](mailto:contact@alumascroofing.com)

# Bridgend Life Centre

## Client Brief and Design

Bridgend Life Centre is a community hub for all ages to come together to access sports and health facilities. With significant areas of failure across the roof our client urgently required a waterproofing solution. The foremost priority was finding a refurbishment option that did not disrupt access for customers. Caltech METcoat fit the bill perfectly with no need for roof strip whilst meeting budget expectations of the client.

**Donna Owen, Area Technical Manager - North Wales, Shropshire & Cheshire, Alumasc Roofing** "Caltech METcoat was the ideal choice for this type of refurbishment. A high-performance, cold-applied resin forms a seamless durable membrane with up to 20 years of waterproof protection".

Compatible with all conventional metal profiled materials the METcoat application is a straightforward process. Crucially our registered contractors clean the roof area, ensuring the failing nuts, bolts and washers are expertly taped and prepared ahead of the METcoat application.

## Challenges

Caltech METcoat is achieved with quick application and no disruption, the only challenge we face can be the UK weather!

**Halo Leisure** "Donna and the team walked us through every step of the process seamlessly. From the comprehensive free roof survey, followed by specification, a reliable cost breakdown, right through to speedy completion on site."

## Environmental Benefits

Giving this roof another lease of life means there is no need for a roof strip and therefore less landfill.

## About

Halo is a registered charity and social enterprise running 20 sport and leisure centres on behalf of local authorities.

Client: Halo Leisure Services

Completion: December 2021
